- Moisture penetration up to 95%
- Solvent free
- Independent of salt contamination

# APPLICATION & BENEFITS

## KÖSTER CRISIN CREAM APPLICATION & BENEFITS

Holes with a diameter of 14 mm are drilled horizontally, ideally in the lowest masonry joint, until 3 cm away from the wall end. The drilled holes are cleaned with compressed air.

The holes are generally, spaced 10 cm apart.

Subsequently, the drilled holes are injected with KÖSTER Crisin Cream from the cartridge with the proper KÖSTER Hand Pistol fitted with an injection tube.

The holes can be sealed immediately with KÖSTER KB Fix 5 flush with the wall surface.

### Important features at a glance:

- + Patented product
- + Easy application
  - > No pump or compressed air equipment required
  - > Can be applied by hand pistol
- + Safe use
  - > Suitable even in cases of high moisture contents (up to 95% +/- 5%)
  - > WTA test certified
- + Variable fields of application
  - > Against all common capillary rising moisture
  - > Independent of the salt contamination
- + Optimal properties
  - > Highly concentrated active ingredient
  - > High efficiency
  - > High degree of penetration
  - > Suitable against all harmful salts
- + Sustainable damp proof waterproofing course against capillary rising moisture
